

8 Bit MCU, Low Power High Performance, AVR ATmega Family ATmega16X Series Microcontrollers, 20 MHz

Manufacturers	Microchip Technology, Inc
Package/Case	VQFN-32
Product Type	Embedded Processors & Controllers
RoHS	
Lifecycle

General Description

The high-performance Microchip's *spicoPower*® 8-bit AVR® RISC-based microcontroller combines 16KB ISP flash memory with read-while-write capabilities, 512B EEPROM, 1KB SRAM, 27 general purpose I/O lines, 32 general-purpose working registers, three flexible timer/counters with compare modes, internal and external interrupts, USART with wake-up on start of transmission, a byte-oriented 2-wire serial interface, SPI serial port, 8-channel 10-bit A/D converter, programmable watchdog timer with internal oscillator, a 9 byte unique serial number and five software selectable power-saving modes. The device operates between 1.8-5.5 volts.

By executing powerful instructions in a single clock cycle, the device achieves throughputs approaching 1 MIPS per MHz, balancing power consumption and processing speed.
