| Please submit RFQ for IPT020N10N5ATMA1 or Email to us: sales@ovaga.com We will contact you in 12 hours. |                                   |                               |  |

## **General Description**

OptiMOS<sup>™</sup> 5 100V industrial power MOSFET IPT020N10N5 in TO-Leadless from Infineon is the ideal choice for high switching frequencies. TO-Leadless (TOLL) package is especially designed for high current applications such as telecom power supply, POL (point-of-load), forklift and light electric vehicles (LEV). With a 60% space reduction compared to the D2PAK 7pin package, TO-Leadless (TOLL) is the perfect solution for highest efficiency, outstanding EMI behavior as well as best thermal behavior and space reduction.

| Features   | Application             |
|--|-------------------------|
| Optimized for synchronous rectification                  | Telecom                 |
| Ideal for high switching frequency                       | Server                  |
| Output capacitance reduction of up to 44%                | Solar                   |
| R DS(on) reduction of up to 43% from previous generation | Low voltage drives      |
| Highest system efficiency                                | Light electric vehicles |
| Reduced switching and conduction losses                  | Adapter                 |
| Less paralleling required                                |                         |
| Increased power density                                  |                         |
| Low voltage overshoot                                    |                         |
