General Description

The devices have a 12 kΩ receiver input impedance, which allows up to 32 transceivers on a bus. Because only one driver should be enabled at any time, the output of a disabled or powered-down driver is tristated to avoid overloading the bus.

The receiver has a fail-safe feature that ensures a logic high output when the inputs are floating. Excessive power dissipation caused by bus contention or by output shorting is prevented with a thermal shutdown circuit.

The part is fully specified over the industrial temperature range and is available in an 8-lead narrow SOIC package.

APPLICATIONS

Power/energy metering

Telecommunications

EMI-sensitive systems Industrial control

Local area networks

Features

TIA/EIA RS-485/RS-422 compliant

12 Mbps data rate

Half-duplex transceiver

Up to 32 nodes on the bus

Receiver open-circuit, fail-safe design

Low power shutdown current

Outputs high-Z when disabled or powered off

Common-mode input range: -7 V to +12 V

Thermal shutdown and short-circuit protection

Industry-standard 75176 pinout

8-lead narrow SOIC package

Application

Power/energy metering

Telecommunications

EMI-sensitive systems Industrial control

Local area networks
