

# NCV33202DMR2G

Data Sheet

NCV33202 Series 1.8 - 12 V 2.2 MHz Rail-to-Rail Operational Amplifier - MICRO-8

Manufacturers ON Semiconductor, LLC

Package/Case MSOP8

Product Type Amplifier ICs

RoHS AEC Qualified PPAP Capable Pb-free Halide free

Lifecycle

## **General Description**

The MC33201/2/4 family of op-amps provides rail-to-rail operation on both the input and output. The inputs can be driven as high as 200 mV beyond the supply rails without phase reversal on the outputs, and the output can swing within 50 mV of each rail. This rail-to-rail operation enables the user to make full use of the supply voltage range available. It is designed to work at very low supply voltages ( $\pm$ 0.9 V) yet can operate with a supply of up to  $\pm$ 12 V and ground. Output current boosting techniques provide a high output current capability while keeping the drain current of the amplifier to a minimum. Also, the combination of low noise and distortion with a high slew rate and drive capability make this an ideal amplifier for audio applications.

#### **Application Features**

Low Voltage, Single Supply Operation (+1.8 V and Ground to +12 V and Ground)

**ONSEMI** 

Input Voltage Range Includes both Supply Rails

Output Voltage Swings within 50 mV of both Rails

No Phase Reversal on the Output for Over-driven Input Signals

High Output Current>

Low Supply Current>

600 W Output Drive Capability

Extended Operating Temperature Ranges (-40°to +105°C and -55°to +125°C)

Typical Gain Bandwidth>
