General Description

Infineon's OptiMOS™ 5 100V n-channel power MOSFET IPT026N10N5 in TO-Leadless (TOLL) package is ideally suited for high switching frequencies. This package is especially designed for high current applications such as POL (point-of-load), forklift, light electric vehicles (LEV) and telecom power supply. With a 60% space reduction compared to D2PAK 7pin package, TOLL is the perfect solution where highest efficiency, outstanding EMI behavior as well as best thermal behavior and space reduction are required.

Features

- Optimized for synchronous rectification
- Ideal for high switching frequency
- Output capacitance reduction of up to 44%
- R_{DS(on)} reduction of up to 43% from previous generation
- Highest system efficiency
- Reduced switching and conduction losses
- Less paralleling required
- Increased power density
- Low voltage overshoot

Application

- Telecom
- Server
- Solar
- Low voltage drives
- Light electric vehicles
- Adapter
